DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I (claims 1-7) is acknowledged and claims 8-21 have been cancelled.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "carved" as recited in the claim is not well understood. Clarification is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-5, as understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Vu et al. USPN 5,377,031.

Vu et al disclose in figs. 3 and 7H an active matrix type liquid crystal display device having a structure in which a pixel TFT is disposed in a trench carved in a substrate; wherein with a section which is not carved in but left hill-shaped being present in the vicinity of the TFT

Art Unit: 2826

51', an underneath light-shielding film 75' disposed beneath a semiconductor layer of the TFT is formed so as to reach at least the top of said hill-shaped section; and a metal electrode layer 76' formed above the semiconductor layer of the TFT extends to the top of said hill-shaped section; and besides, on the top of said hill-shaped section, a film thickness of an interlayer insulating film laid between said underneath light-shielding film and metal electrode layer is made thinner (left and right portions of insulating layer outside semiconductor layer) than in other sections thereof.

As for claim 2, Vu et al disclose an interlayer insulating film laid between said underneath light-shielding film and metal electrode layer comprising a first interlayer film 54' formed between the underneath light-shielding film and the semiconductor layer as well as a gate insulating film (unnumbered) formed between the semiconductor layer and the metal electrode layer; and, on the top of said hill-shaped section, at least a part of said first interlayer film in the direction of the thickness is etched away.

As for claim 3, it refers to a process and "product by process" claims are directed to the product per se, no matter how actually made, In re Hirao, 190 USPQ 15 at 17 (footnote 3). See also In re Brown, 173 USPQ 685 and In re Thorpe, 227 USPQ 964, 966. Therefore, the way the product was made does not carry any patentable weight as long as the claims are directed to a device. Further, note that the applicant has the burden of proof in such cases, as the above case law makes clear. Also see MPEP 2113.

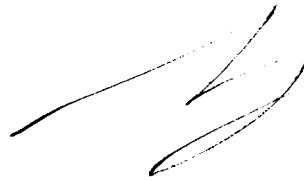

As for claim 4, Vu et al disclose a hill-shaped section being formed so as to enclose the TFT.

Art Unit: 2826

As for claim 5, Vu et al disclose hill-shaped section is formed on either side of a region where the semiconductor layer of the TFT is formed in the direction parallel to a gate line 59 so that said region may become groove-shaped.

Allowable Subject Matter

5. Claims 6 and 7 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

A handwritten signature in black ink, consisting of several fluid, overlapping strokes.
